

SafelT File Shredding

It is almost impossible to remove all information on your hard drive with the structure and functionality of the operative systems currently available. Format, Recycle Bin and other delete commands do NOT remove information stored on your computer. These commands only alter the structure of the drive, leaving most of the data intact and recoverable with software tools easily available. The following examples highlight typical situations that require file shredding:

- When the computers in your organisation are returned to the leasing company at the end of the leasing period.
- Selling used computers further.
- Donating used computers to aid organizations or schools.
- In case of internal changes within your organisation, where work stations are being swapped.
- Sending the computers for maintenance or use elsewhere outside the organisation.
- Removing computers from use.

Key Features

SafelT File Shredding is a user friendly program that prevents restoring of sensitive files and information. Marked files will be overwritten a selected number of times, which makes it impossible to recreate the information. Select files to shred with a simple "right click". Select the number of times you want to overwrite the information. Use the "Shred all Free Space Wizard" to overwrite all old files left behind such as forgotten tempfiles and normally "deleted" files. This security software is easy to administrate and install on all mobile or stationary PC:s.

By using the SafelT File Shredding software:

- The hard disks can be cleaned whenever needed - without special equipment.
- Computers can be sold, donated or rented without data security risks.
- No need for actual physical destruction of the used hard disks.

Technical Specifications

System Requirements

- SafelT is optimized for all Windows platforms.
- 64 MB Ram.
- 20 MB of free disk space.

Security Technology

- Overwriting algorithms:
 - Gutman (35 passes),
 - DoD (7 passes),
 - Random characters.

• Easy-to-use program interface .

• Protect your private and sensitive files with a simple right-click.
